

Forget salt.
Think fresh.

Naked 
Freshwater Pool Systems

“We’re all about fresh water,
pure and simple.

Make the natural choice
and turn your own backyard
into a Freshwater Oasis.”

Naked Water - swimming as nature intended™

Many people around the world are lucky enough to enjoy high-quality tap water and appreciate the advantages of fresh water at home. For generations, chlorine and saltwater systems have been commonly accepted as the standard methods for pool sanitization.

Thanks to innovative technology from Naked Pools, pool owners can enjoy naturally balanced, fresh-feeling water without the need for high salt levels or heavy chlorine use.

The benefits are crystal clear

Gentle on skin and eyes

Perfect for asthmatics, psoriasis and eczema

Up to 50% saving on running costs

Longer lasting equipment and pool surrounds

No need to wash swimwear or shower after swimming

Easy to set up and manage

Recycle the water direct to your garden or holding tank

Expertly designed in Australia, where one in three Australians have some kind of skin condition, or suffer from asthma, the Naked Freshwater systems have become a national favorite as consumers are understanding there are better alternatives to chlorine, salt or mineral based chlorinators.

Asthma & Allergies

If eczema, dermatitis, itchy skin, asthma or skin rashes are a problem at your home, our fresh water alternative is making a huge impact in the swimming pool industry. We invite you to explore the difference you can make to your swimming experience and take the first steps to a healthier lifestyle for your family and friends.

Less chlorine than tap water

Most residential tap water comes from natural sources such as rivers, lakes, or underground aquifers, but it is typically filtered and treated to keep it fresh and free of bacteria when used at home. Chlorine is among the most common additives used by water treatment facilities to protect against germs and pathogens. In nearly all cases, chlorine is present in such low concentrations that taste and odor are not noticeable. The same principle is applied in a Naked Pool system to ensure fresh and crystal clear water provides you with the ultimate swimming experience.

“Having young children, I no longer need to worry about eczema flare ups or the smell of chlorine on their skin and hair.”

Rejuvenating & Refreshing

Differing from traditional pool and spa systems that use chlorine, the Naked System introduces copper and silver ions, naturally occurring minerals that are used in managing water conditions.

Copper environments discourage algae growth, and silver ions have historically been part of water conditioning methods.

With extremely low amounts of salt and the minerals present, the water in a Naked Pool has a soft and rejuvenating feel, best described as swimming in a fresh water stream.

And there is no need to shower or rinse your swimwear after use!

What is ionization?

Copper and silver ionization was first used by the Greeks, Romans and ancient Egyptians, and has been successfully used in swimming pools for over 50 years. NASA even use ionization for their drinking water in space. The Naked system uniquely combines ionization with a powerful built-in oxidizer, keeping your pool crystal clear.

And unlike traditional pool systems that use chlorine, the Naked System maintains residual levels of copper and silver ions instead of chlorine and other chemicals, a natural solution that leaves you feeling refreshed and rejuvenated after swimming.

Environmental Benefits

Save up to 50% on running costs.

The Naked Pools System is customized to the needs of your swimming pool. This reduces running time and power consumption and increases the longevity of your pool.

Recycle the pool water without dilution.

Recycle pool water according to local council regulations. You may reuse pool water for gardening or in holding tanks as gray water, which can help conserve water resources and limit chemical discharge into public drainage.

All pool equipment will last longer.

Without the harsh chemicals found in chlorine and salt chlorinated swimming pools, your pool filters, pipes, tiles and other surrounds will last much longer. Again, saving you money and the need to replace products such as plastic or glass from around your pool.

Your swimwear will last longer.

Your clothes won't deteriorate like they do when swimming in chlorine or salt pools. In fact, the water is just like having a shower, therefore you do not need to rinse your bathers or yourself after swimming.

Reduction in chemical usage.

You do not need to add other chemicals such as stabilizer or blockout to maintain chlorine levels in your pool like traditional systems. This makes your pool better for your health and the environment.

“The latest technology in the Naked Fresh Water System offers a modern alternative for families seeking comfort and reduced chemical use in their pools.”

Your freshwater pool in perfect balance and harmony

The Naked Freshwater System

The Naked Hybrid System is made up of a digital control unit which supplies and manages current to the electrode assembly (OXI & ION Cell). Electrolysis passes through the copper and silver anodes, releasing the ions into the water.

The system combines copper and silver ionization with oxidization technology to help maintain balanced and clear pool water.

In addition, oxidization is used as water passes over the titanium plates producing small, untraceable amounts of chlorine ensuring organic matter and other contaminants are eliminated from the water.

The system will work with any type of pool surface including stainless steel and can be retrofitted to existing pools.

NKD-R

The NKD-R is designed for medium to large pools.

NKD-M

The NKD-M Naked Freshwater System for small pools and swim spas.

NKD-pH Controller

The perfect compliment to your Naked Freshwater System.

NKD-R

The Naked NKD-R system supports maintaining your pool water without the need to add chlorine, high salt, or minerals.

Designed from the ground up, the hybrid system combines ionization and oxidization delivering you crystal clear water without that chlorine smell, feel or taste. Ideal for medium to large swimming pools, a single NKD-R System can manage water volumes up to 40,000 gallons.

NKD-M

Enjoy all the big benefits of our most awarded NKD-R Freshwater System in a MINI. The NKD-M is tailored for pools and swim spas up to 8,000 gallons. The MINI is fully compatible with the Naked pH Controller, saving you time and simplifying water balance.

NKD-pH Controller

Plug the NKD-pH Controller into the Naked System and it is automatically configured to help manage the pH balance of your pool water on a daily basis.

The addition of semi-automatic dosing further helps control water balance making pool maintenance even simpler while saving you time and money with less visits to the pool shop.

Fresh thinking

Once your system is installed, simply download the Naked Pools App and register the details with us. We will provide you with regular support and information to ensure your Naked Freshwater System always provides you with the ultimate swimming experience.

Award winning pool system

Recognized by Australia and New Zealand's industry body SPASA, the NKD-R System has received multiple awards for innovation in freshwater pool technology.

"Designed in Australia, this product is energy and cost efficient compared to conventional systems. It's the perfect option for environmentally conscious customers, people with health conditions, sensitivities or allergies, and swimmers preferring a freshwater experience."

- Good Design Awards 2021.

“Why doesn’t everyone have one of these!”

The number one feedback we hear from our customers.
